SOFTWARE UPGRADE PROCEDURE

MODEL NUMBER	CI 8-120 DSP, CI 8-150 DSP AND CI 16-60 DSP
REFERENCE NUMBER	TD2022-21-CI
DATE	18 January 2022

MANUAL UPDATE PROCEDURE FOR CI 8-120 DSP, CI 8-150 DSP AND CI 16-60 DSP

NOTE the following important points before beginning the software upgrade procedure.

- *You will require a laptop that is linked to the same network as the CI Amplifier being updated.*
- *Depending on the specific configuration of your computer, it may be necessary to turn off the firewall and virus protection for the upgrade procedure to be consummated.*

1   Download the latest CI 8-120 DSP, CI 8-150 DSP or CI 16-60 DSP software upgrade file from their respective product pages at nadelectronics.com. The software is downloaded as a zip file.

2   Unzip the file and save the content "xxx…bin" to a location/folder in your computer. Remember the file's location.

3   Access the CI Amplifier via a webpage by entering it's IP address into the web browser. This will require the use of an IP detector.

4   Along the top of the CI Amplifier webpage, click on the **Settings** tab.

5   Select the **Check for Updates** button.

6   A window will appear offering the choice of an **Internet Update** or **Manual Update.** Click the **Manual Update** button.

7   A window will appear allowing you to browse the files on your computer. **Browse** to the location of the software upgrade file on your computer and click **Start Update.**

8   The file should take approximately 3 minutes to download into the CI Amplifier. A message will inform you if the CI Amplifier was successfully updated, after which the CI Amplifier will reboot.
